

# Project EA Sports - FIFA

---

CS109a Final Project

11 December 2020

Group 4 – Clement Brenot, Luis Corrales, Ryuichiro Hashimoto, Yuki Yaguchi

---

1

## Agenda

---

1. Overview
2. Part A – Rank the Players
3. Part B – Classify Player Position
4. Part C – Which Club has the Best Staff?
5. Part D – How Things will be in 2021?
6. Possible Future Improvements

2

# 1. Overview

3

3

## Data and Selected EDA Results

Overview

Part A

Part B

Part C

Part D

### Data pre-processing

### A good overall score? 75 and up

### Old players decline... but not always

### International reputation is a guarantee

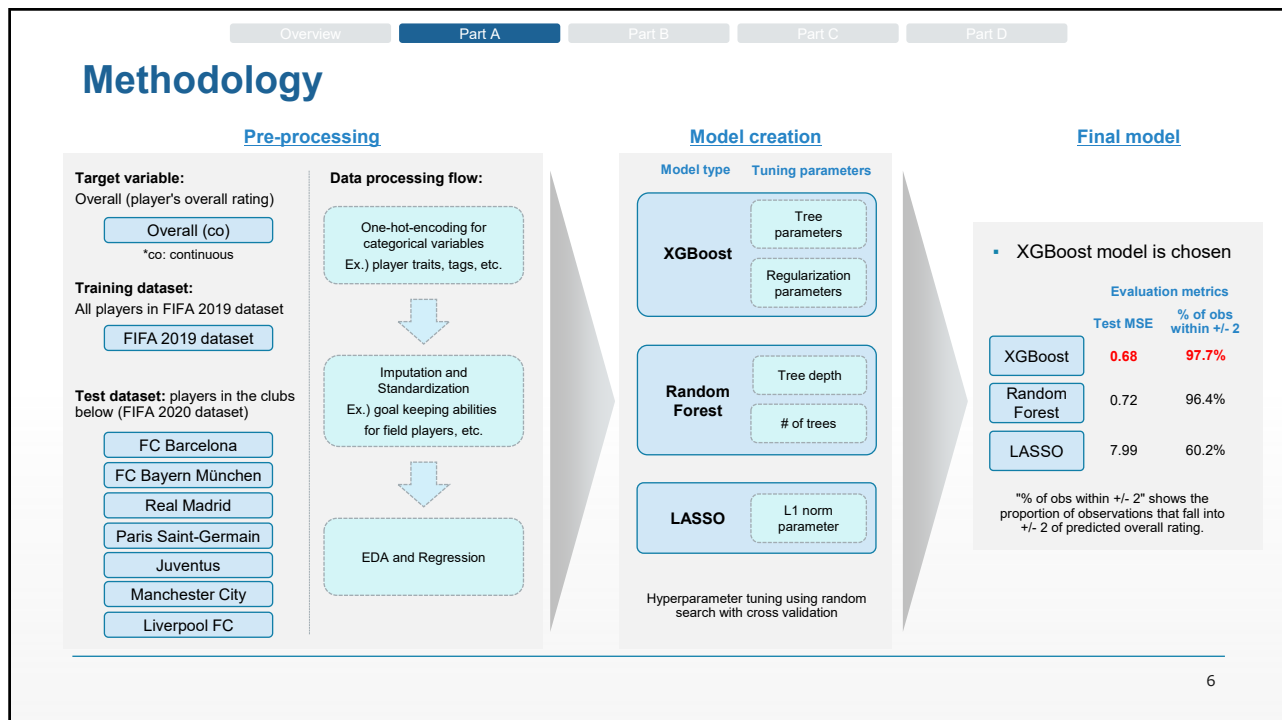

4

4

## 2. Part A – Rank the Players

5

5

6

Overview

Part A

Part B

Part C

Part D

## Overall Score in Test Set – Actual vs. Prediction, by models

- XGBoost almost completely predicted overall ratings for almost all players.
- LASSO especially misses the highest range, potentially due to its linear equation form.

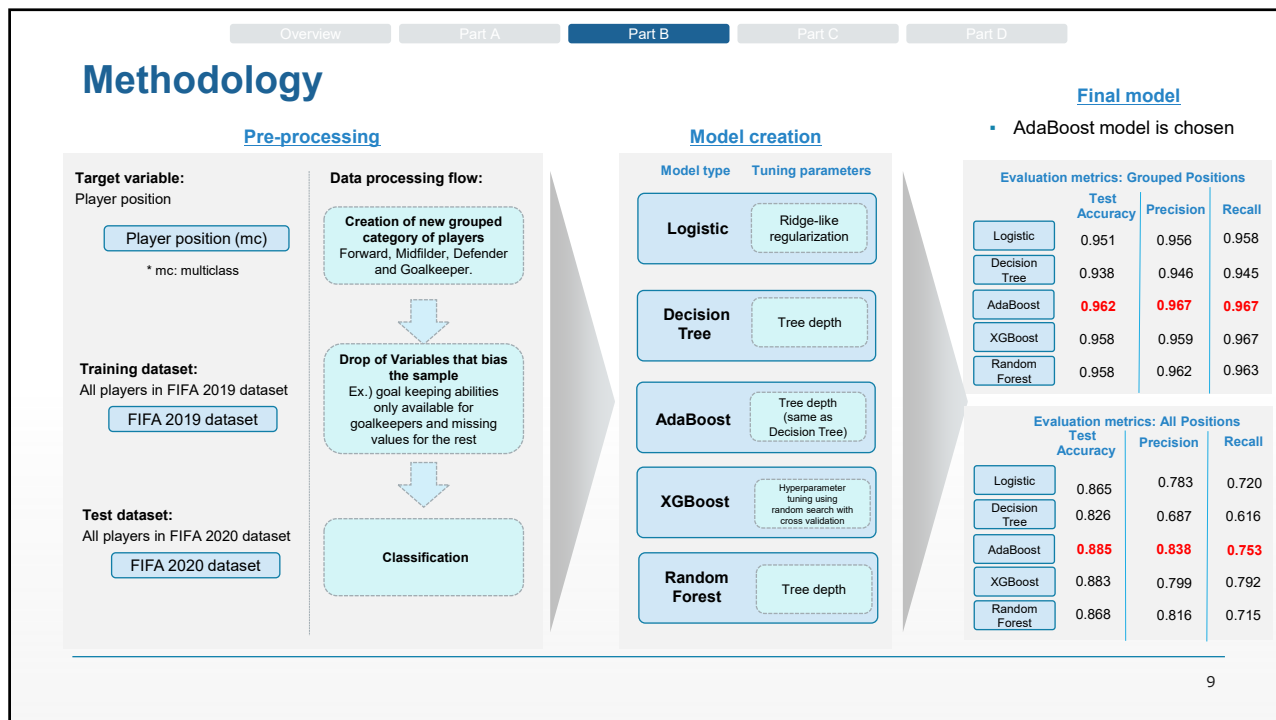

7

7

## 3. Part B – Classify Player Position

8

8

9

10

Overview

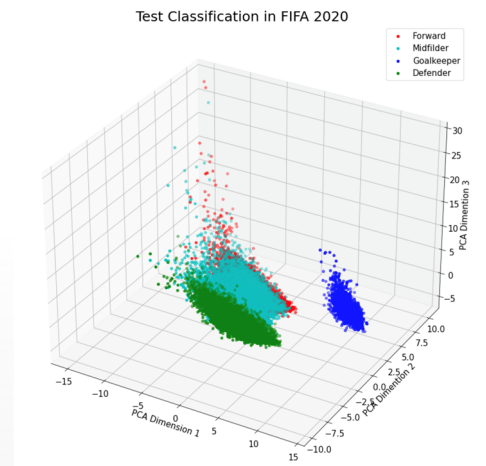

Part A

Part B

Part C

Part D

## PCA components of Grouped Positions: 2 and 3 Components

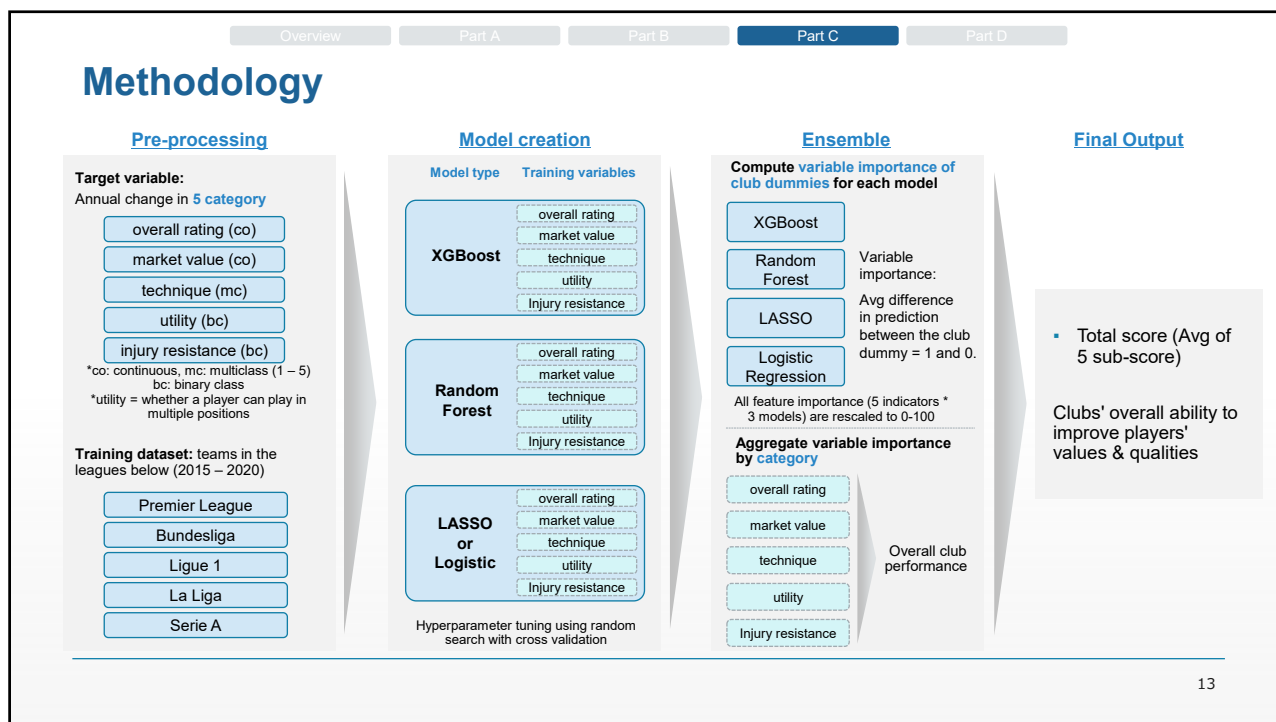

11

11

## 4. Part C – Which Club has the Best Staff?

12

12

13

Overview Part A Part B **Part C** Part D

## Scoring Methodology

- Each sub score (1 – 5) is scaled to 0 – 100 based on variable importance from 3 models.
- Total score is the average of sub scores

	League	Club	Total Score	(1) overall rating	(2) Market value	(3) Technique	(4) Utility	(5) Injury resistance
1	French Ligue 1	Amiens SC	70.9	100.0	81.4	72.2	39.2	67.4
2	Italian Serie A	Atalanta	66.9	77.8	100.0	62.9	37.6	58.1
3	English Premier League	Tottenham Hotspur	62.7	57.8	60.2	72.9	62.1	67.6
4	French Ligue 1	RC Strasbourg Alsace	61.9	52.2	75.0	93.2	30.6	62.2
5	Spain Primera Division	RCD Espanyol	59.3	62.3	50.3	58.3	76.1	50.6
:	:	:	:	:	:	:	:	:
94	French Ligue 1	Stade de Reims	38.2	12.9	16.8	59.9	33.4	58.0
95	French Ligue 1	Stade Brestois 29	37.8	23.4	34.6	39.9	25.5	50.1
96	German 1. Bundesliga	Fortuna Düsseldorf	35.2	18.3	35.1	33.3	15.3	57.6
97	Spain Primera Division	CA Osasuna	32.6	4.0	6.3	31.9	55.7	51.1
98	Spain Primera Division	Granada CF	28.4	0.0	0.0	40.4	31.4	52.7
		Max	70.9	100.0	100.0	100.0	100.0	100.0
		Mean	48.2	38.3	46.7	58.7	35.2	55.1
		Min	28.4	0.0	0.0	0.0	0.0	0.0
		Standard deviation	6.8	13.5	12.9	17.2	15.8	12.7

14

14

Overview

Part A

Part B

Part C

Part D

## Top 3 clubs vs. Bottom 3 clubs

- Amiens SC scores the best in player overall score, while Atlanta improves market value.
- Bottom 3 clubs' performance are poor, especially for these two metrics.

15

15

Overview

Part A

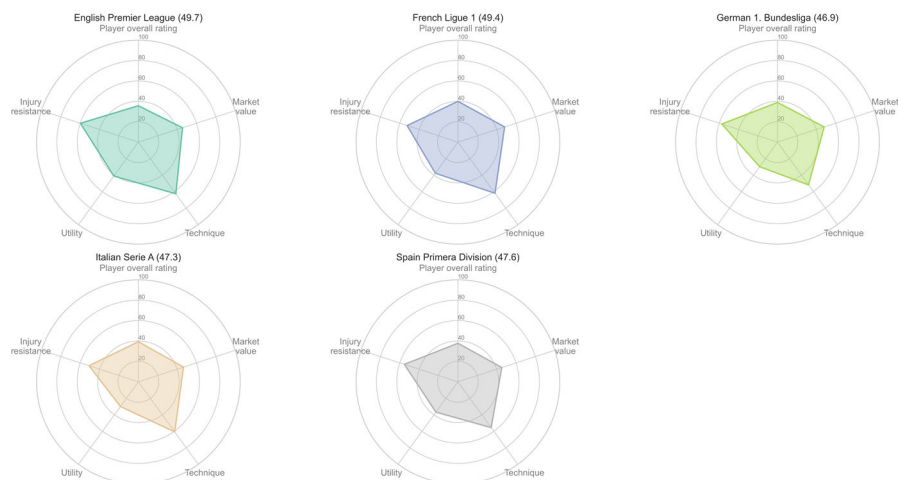

Part B

Part C

Part D

## League Average

- English Premier League and French Ligue 1 are, on average, better than other 3 leagues.

16

16

Overview

Part A

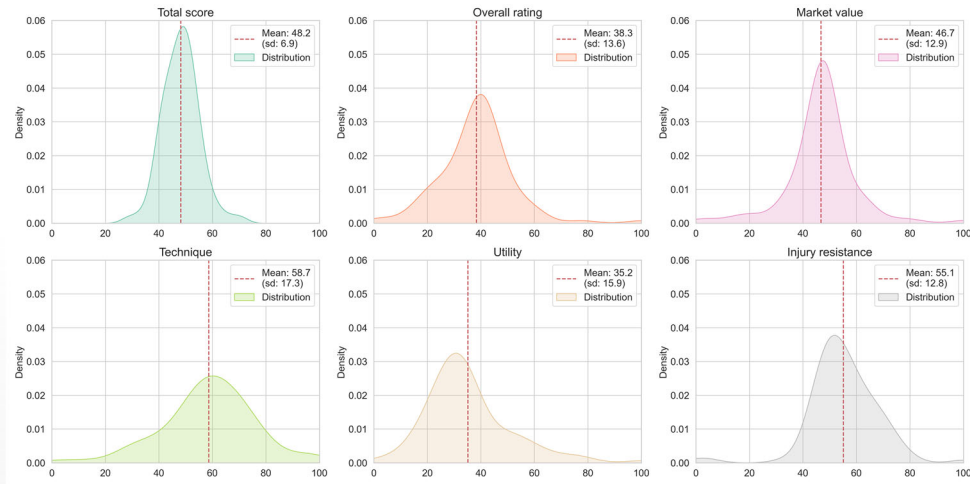

Part B

**Part C**

Part D

## Score Distributions

- Technique and Utility have a wider distribution than other scores.

17

17

## 5. Part D – How Things will be in 2021?

18

18

Overview Part A Part B Part C **Part D**

## Methodology

**Pre-processing**

**Target variable:**  
skill\_summary (average of all skills) of the following year

**Training dataset:** teams in the leagues specified in instruction (below)

- Premier League
- Bundesliga
- Ligue 1
- La Liga
- Serie A

**Model creation**

Model type	Training data
<b>XGBoost</b>	2015 / 2016
	2016 / 2017
	2017 / 2018
	2018 / 2019
	2019 / 2020
<b>Random Forest</b>	2015 / 2016
	2016 / 2017
	2017 / 2018
	2018 / 2019
	2019 / 2020
<b>Elastic Net</b>	2015 / 2016
	2016 / 2017
	2017 / 2018
	2018 / 2019
	2019 / 2020

Hyperparameter tuning using random search with cross validation

**Ensemble**

**Weight by year of training data**

2015 / 2016	0.15
2016 / 2017	0.15
2017 / 2018	0.20
2018 / 2019	0.20
2019 / 2020	0.30

\* Model trained on recent year had lower test MSE in general.

**Weight by model**

XGBoost	0.30
Random Forest	0.40
Elastic Net	0.30

\* Result (better to worse): Random Forest > Elastic Net > XGBoost

**Final model**

- Ensemble of 15 models
- Predict on 2020 dataset to predict skill\_summary score in 2021

19

19

Overview Part A Part B Part C **Part D**

## The model result (test MSE score)

Test dataset: skill\_summary score in 2020 predicted by data in 2019  
Above number in each cell is test MSE score, the number below is its weight in the entire 15 models (%)

Test MSE Weight in final ensemble model	2015 / 2016 (year weight: 0.15)	2016 / 2017 (year weight: 0.15)	2017 / 2018 (year weight: 0.20)	2018 / 2019 (year weight: 0.20)	2019 / 2020* (year weight: 0.30)
<b>XGBoost</b> (model weight: 0.30)	8.15 4.5%	6.33 4.5%	6.25 6.0%	6.07 6.0%	2.15 9.0%
<b>Random Forest</b> (model weight: 0.40)	6.58 6.00%	5.27 6.00%	5.24 8.00%	5.12 8.00%	0.76 12.0%
<b>Elastic Net</b> (model weight: 0.30)	7.90 4.5%	5.05 4.5%	5.02 6.0%	4.94 6.0%	4.81 9.0%

\* Because 2019 / 2020 model is trained on the same data as test dataset, this is for reference only

20

20

Overview

Part A

Part B

Part C

Part D

## The model result (examples)

We applied the ensemble model to make prediction for skill\_summary of specified players in the past years and compared them with actual result.

21

21

## 6. Possible Future Improvements

22

22

## Possible Future Improvements

---

Do we agree with our  
client on definitions and  
methodological choices?

Could neural networks  
further improve  
predictions?

---

23
